

GEOCHEMICAL TRACERS FOR DISCRIMINATING RECHARGE AND SUBSYSTEMS IN A CRBG AQUIFER

*By Kyle Duckett
Master's Student
University of Idaho*

*Department of Geologic Sciences
Graduate Advisor: Dr. Jeff Langman*

Collaborators: John H. Bush, Pamela Dunlap, Erin S. Brooks, Jeff M. Welker

- Isotopes are reflective of environmental conditions and source waters
- Water chemistry and isotope signals can be used as tracers
- Multiple tracers bring clarity to groundwater evolution

- Northern Signal
- Eastern Signal
- R₂ Zone (Moscow 9, UI 3, UI 4) = Convergence Zone
- R₂ Zone + Northern Signal + Creek = Pullman Wells

Acknowledgements

This work would not be possible without the funding and ongoing support from the Palouse Basin Aquifer Committee (PBAC). A special acknowledgement for Steve Robischon, who in many ways was the motivating force behind this force. An additional thank you to the many people who assisted in collection of field data over the course of the project.
